## Description

A base is fixed permanently to the rigid structure of the building. Recommended distance between bases 2500 up to 3000mm. Standard height of ground post is 500mm.

The davit arm is composed of an arm and a jib. It is connected to the posts by two pins. The end user can easily move the davit arm along the building and tilt it in working position. The mast and the arm are detachable to facilitate handling.

Outreach of the davit arm is comprised between 600 and 1500mm. The anchor points are moveable. The arm can turn 360° to facilitate the connection of the ropes and user can reach a larger surface on the facade.

## Technical specifications

Delivered with an user manual

Material : Galvanized steel and aluminium

---

Compliant with EN1808:2015  
MADE IN EU

## Advantages

- Discrete, easily hidden when not in use
- Lightweight solution
- Possibility to connect auxiliary hoist for motorized lifting operations
- Bespoke designs upon request
